5. Local Execution Guide & Production Deployment

1. Start Local Development Server:

```
cd C:\Users\prave\.gemini\antigravity\scratch\dr-praveen-homoeopathy
$env:PATH = 'C:\Users\prave\nodejs;' + $env:PATH
npm run dev
```

2. Preview in Web Browser: Open **`http://localhost:3000`**

3. Deploying to Vercel (Production): Push the codebase to GitHub or run `npx vercel`. Configure Supabase environment variables in the Vercel dashboard: `NEXT_PUBLIC_SUPABASE_URL` and `NEXT_PUBLIC_SUPABASE_ANON_KEY`.

4. Supabase Database Execution: Run `supabase/schema.sql` in the Supabase SQL Editor. It creates tables, indexes, and Row Level Security (RLS) policies allowing public read access to active products and restricting write operations to authenticated administrators.
